

PostgreSQL Database Wizard

For cPanel & WHM version 64

(Home >> Databases >> PostgreSQL Database Wizard)

Overview

This wizard guides you through the setup of a PostgreSQL® database, user accounts, and user privileges.

We recommend that you use this wizard to create your first database and user.

To create additional databases or users, use the [PostgreSQL Databases](#) interface (Home >> Databases >> PostgreSQL Databases).

Set up a database

To set up a database, perform the following steps:

1. In the *New Database* text box, enter a name for the database and click *Create Database*.

Note:

The maximum length of a database name is 63 characters. If your hosting provider enabled database prefixing, this length includes the database prefix and underscore character (_).

2. In the *Username* text box, enter a name for the user who you wish to allow to manage the database.

Note:

The maximum length of a database username is 63 characters. If your hosting provider enabled database prefixing, this length includes the database prefix and underscore character (_).

3. Enter and confirm the new password in the appropriate text boxes.

Notes:

- The system grades the password that you enter on a scale of 100 points. 0 indicates a weak password, while 100 indicates a very secure password.
- Some web hosts require a minimum password strength. A green password *Strength* meter indicates that the password is equal to or greater than the required password strength.
- Click *Password Generator* to generate a strong password. For more information, read our [Password & Security](#) documentation.

4. Click *Create User*.

5. Review the *User* and *Database* names and click *Submit* to add the new user to the new database.

The system displays a message that states that the system set up the database and user account successfully.

Additional options

After you complete the database setup process, select one of the following options:

- *Add another database* — Click to return to the start of the *PostgreSQL Database Wizard* to add more databases.
- *Add another PostgreSQL Databases User* — Click to open the *PostgreSQL Databases* interface (*Home >> Databases >> PostgreSQL Databases*) to create additional user accounts and assign them to a database.
- *Return to Home* — Returns you to the cPanel *Home* interface.

Note:

When you use the *PostgreSQL Database Wizard* to add a user and a database, the system automatically grants the user access to the database. You do not need to use the *Add User to Database* feature in the *PostgreSQL Databases* interface (*Home >> Databases >> PostgreSQL Databases*).
